

Deployment Guidelines

Once a request for assistance is received, the Incident Management Team and OCC, in consultation with the requesting medical facility, will determine what support services Ornge can provide. This will depend on a number of criteria, including:

- Requirements for Airway Management & Mechanical Ventilation.
- Significant event that has the potential to affect the local health care system of a community.
- Outbreak in a remote, Indigenous or small community hospital where local resources are overwhelmed.
- Expanding or escalating incident likely to overwhelm local health care resources.
